

In this task, you use fleet manager to gather inventory from EC2 instance.

In the search box, enter **Systems Manager** and click on:

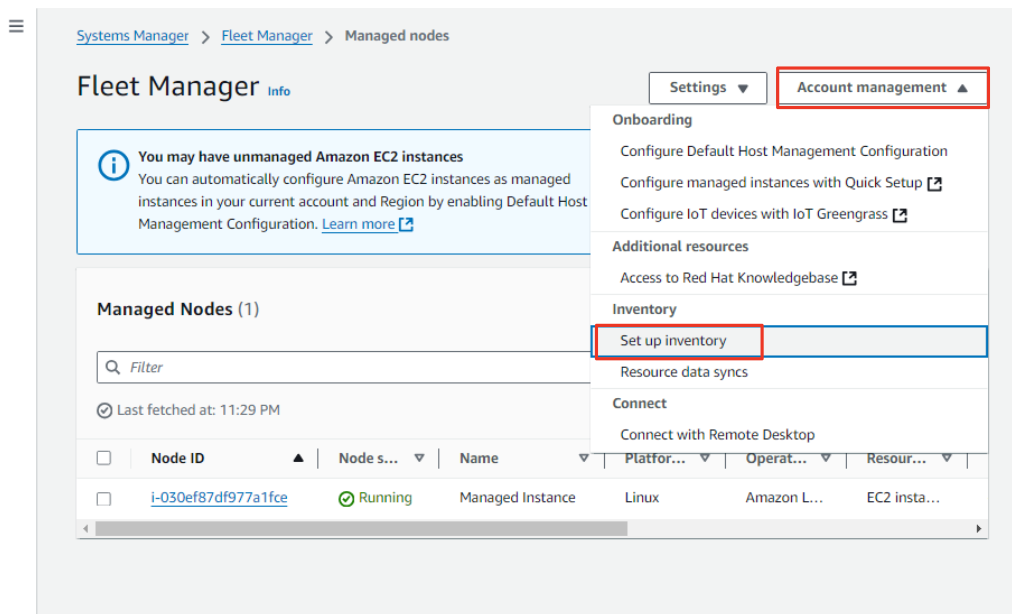

In **Node Management** → **Fleet Manager**:

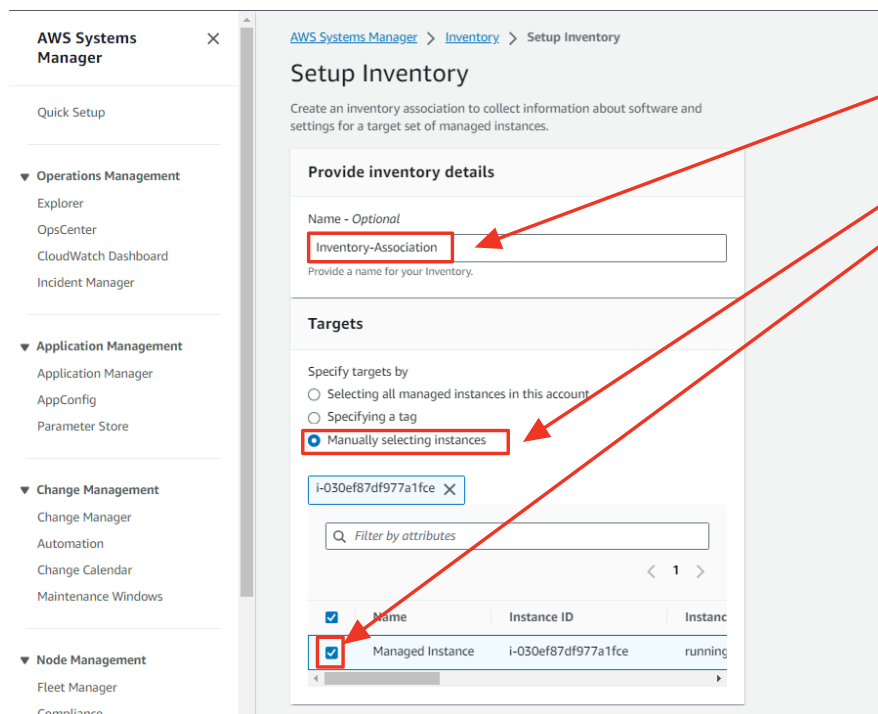

@MaayanAimelak

In **Account management** —————> **Set up inventory:**

To create an association that collects information about software and settings for your managed instance, choose the following options:

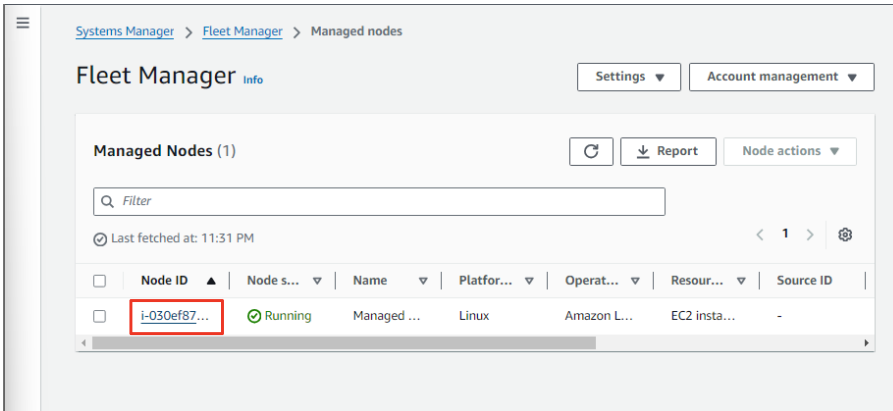

Scroll down and **Setup inventory:**

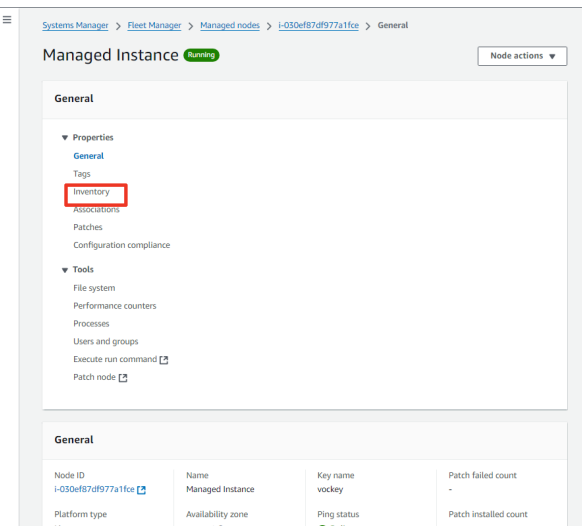

Setup Inventory

@MaayanAimelak

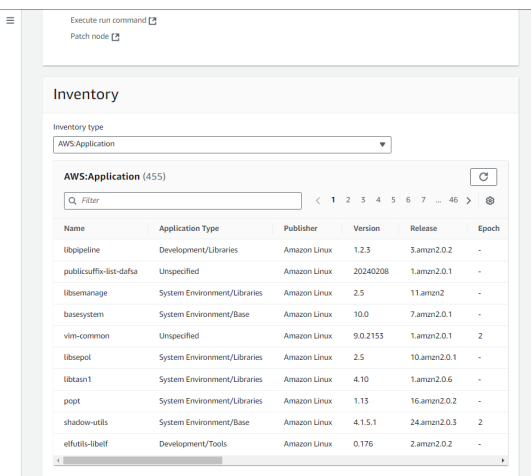

Click on the **Node ID**:

This is the Node overview, click on **Inventory**:

This tab lists all of the applications in the instance:

End of Task 1!
